

Manual Submissions (Retakes)

Sally A.M. Hogenboom

2023-04-26

Setup

```
library(yOURemail)
library(tidyverse)
library(magrittr)

# Authenticate & get Outlook Environment
outlook <- Microsoft365R::get_business_outlook()
```

Goal

Manually add a new submission to the `submission_overview`. Is useful for cases where students' submit the retakes directly to the teacher or when an assignment consists of multiple parts (e.g., Literatuurstudie).

The available information (e.g., `student_name`) are copied from earlier submission records - which should already exist in the `submission_overview`.

Requirements

- This code only works for students that are already included in the submission overview. For completely new students it is best to directly add the information to the Excel.

Execution

```
add_manual_submission(student_id = 852416207,
                      submission_overview = here::here("Nakijk0verzicht.xlsx"),
                      submission_date = "25/07/2022",
                      n_workdays = 15,
                      assignment = "T1")
```

Expected Behavior

Add a new line to the `submission_overview`.

Development To Do's

- Account for non-existing student information. Perhaps with a command prompt for additional information.
